Chapter 1

Namespace Index

1.1 Namespace List

Here is a list of all documented namespaces with brief descriptions:

pessum	Pessum namespace	3
pessum::log	Log namespace	3

Chapter 2

Namespace Documentation

2.1 pessum Namespace Reference

Pessum namespace.

Namespaces

- [log](#)

Log namespace.

2.1.1 Detailed Description

Pessum namespace.

Base namespace for all pessum functions

2.2 pessum::log Namespace Reference

Log namespace.

Enumerations

- enum [LogType](#) {
 [ERROR](#), [WARNING](#), [TRACE](#), [DEBUG](#),
 [SUCCESS](#), [INFO](#), [DATA](#), [NONE](#) }

LogType enum.

Functions

- void [Log](#) (int type, std::string msg, std::string func)
Log output member.
- std::pair< int, std::string > [FGetLog](#) (int type)
Get log entry; full.
- std::string [GetLog](#) (int type)
Get log entry.
- std::pair< int, std::string > [IFGetLog](#) (int index)
Get log entry; full index.
- std::string [IGetLog](#) (int index)
Get log entry; index.
- std::vector< std::pair< int, std::string > > [VFGetLog](#) (int start, int end)
Get log entry; full vector.
- std::vector< std::string > [VGetLog](#) (int start, int end)
Get log entry; vector.
- void [SetLogHandle](#) (void(*handle)(std::pair< int, std::string >))
Set log handle full.
- void [SetLogHandle](#) (void(*handle)(std::string))
Set log handle.
- std::string [GetTypeStr](#) (int type)
Get type string from type int.
- void [SaveLog](#) (std::string file)
Saves log entries to file.

Variables

- std::vector< std::pair< int, std::string > > [global_logs](#)
- void(* [log_handle_full](#))(std::pair< int, std::string >) = NULL
- void(* [log_handle](#))(std::string) = NULL

2.2.1 Detailed Description

Log namespace.

Namespace for all logging functionality in the pessum library.

2.2.2 Enumeration Type Documentation

2.2.2.1 LogType

```
enum pessum::log::LogType
```

LogType enum.

Enum of log types for different situations.

Enumerator

ERROR	Error log type
WARNING	Warning log type
TRACE	Trace log type, for finding position in the program
DEBUG	Debug log type, for final debugging
SUCCESS	Success log type
INFO	Info log type, for program information
DATA	Data log type, for data output
NONE	No log type

2.2.3 Function Documentation

2.2.3.1 FGetLog()

```
std::pair< int, std::string > pessum::log::FGetLog (  
    int type )
```

Get log entry; full.

Gets last log entry of specified type with full information.

Parameters

<i>type</i>	The type of log entry to find
-------------	-------------------------------

Returns

Pair of log type and formatted string of log entry

See also

[GetLog\(\)](#)

2.2.3.2 GetLog()

```
std::string pessum::log::GetLog (  
    int type )
```

Get log entry.

Gets last log entry of specified type with formatted string.

Parameters

<i>type</i>	The type of log entry to find
-------------	-------------------------------

Returns

Formatted string of log entry

See also

[FGetLog\(\)](#)

2.2.3.3 GetTypeStr()

```
std::string pessum::log::GetTypeStr (
    int type )
```

Get type string from type int.

Determines the string corresponding to type int

Parameters

<i>type</i>	Type in to convert to string
-------------	------------------------------

Returns

String corresponding to type int

See also

[LogType](#)

2.2.3.4 IFGetLog()

```
std::pair< int, std::string > pessum::log::IFGetLog (
    int index )
```

Get log entry; full index.

Gets last log entry of specified index with full information.

Parameters

<i>index</i>	The log entry index from global_logs
--------------	--------------------------------------

Returns

Pair of log type and formatted string of log entry

See also

[IGetLog\(\)](#)

2.2.3.5 IGetLog()

```
std::string pessum::log::IGetLog (
    int index )
```

Get log entry; index.

Gets last log entry of specified index with full information.

Parameters

<i>index</i>	The log entry index from global_logs
--------------	--------------------------------------

Returns

Formatted string of log entry

See also

[IFGetLog\(\)](#)

2.2.3.6 Log()

```
void pessum::log::Log (
    int type,
    std::string msg,
    std::string func )
```

Log output member.

Function for all logging output. Log entry is saved to global_logs.

Parameters

<i>type</i>	The type of log entry
<i>msg</i>	Format string of log entry
<i>func</i>	The name of the function creating the log entry

See also

[global_logs](#), [GetLog\(\)](#)

2.2.3.7 SaveLog()

```
void pessum::log::SaveLog (
    std::string file )
```

Saves log entries to file.

Saves the log entries from `global_log` to specified file path

Parameters

<i>file</i>	Path to file to output to log, defaults to "output.log"
-------------	---

See also

[global_logs](#)

2.2.3.8 SetLogHandle() [1/2]

```
void pessum::log::SetLogHandle (
    void(*) (std::pair< int, std::string >) handle )
```

Set log handle full.

Sets `log_handle_full` with specified function pointer

Parameters

<i>handle</i>	Pointer to function with return of void and args of a pair of int and string
---------------	--

See also

[log_handle_full](#)

2.2.3.9 SetLogHandle() [2/2]

```
void pessum::log::SetLogHandle (
    void(*) (std::string) handle )
```

Set log handle.

Sets log_handle with specified function pointer

Parameters

<i>handle</i>	Pointer to function with return of void and args of a string
---------------	--

See also

[log_handle_full](#)

2.2.3.10 VFGetLog()

```
std::vector< std::pair< int, std::string > > pessum::log::VFGetLog (
    int start,
    int end )
```

Get log entry; full vector.

Gets a set of log entries between specified start and end index with full information.

Parameters

<i>start</i>	The first index value
<i>end</i>	The last index value

Returns

vector of pairs of log types and formatted strings

See also

[VGetLog\(\)](#)

2.2.3.11 VGetLog()

```
std::vector< std::string > pessum::log::VGetLog (
    int start,
    int end )
```

Get log entry; vector.

Gets a set of log entries between specified start and end index with formatted string.

Parameters

<i>start</i>	The first index value
<i>end</i>	The last index value

Returns

vector of formatted strings

See also

[VFGetLog\(\)](#)

2.2.4 Variable Documentation

2.2.4.1 global_logs

```
std::vector< std::pair< int, std::string > > pessum::log::global_logs
```

Vector storing all previously called log outputs

2.2.4.2 log_handle

```
void(* pessum::log::log_handle)(std::string) = NULL
```

Pointer to function for handling logs with only formatted string

2.2.4.3 log_handle_full

```
void(* pessum::log::log_handle_full)(std::pair< int, std::string >) = NULL
```

Pointer to function for handling log calls with full log information
